

See Your Pool Or Hot Tub In A New Light

Whether it's an above-ground pool, inground pool or a hot tub, they all take on a new life at night when they are accented by artificial lighting. Popular lighting systems include transparent fiber-optic cable which adds a soft, attractive accent around the perimeter of a swimming pool or hot tub. When installed as 'end lighting', it fully illuminates a pool or hot tub underwater, creating colourful lighting effects with a revolving colour wheel that sets the mood in the backyard to suit any occasion.

Fiber-optics can also be used to add colour to water as it cascades down from a water feature into the pool or spa below, or to outline the edges of walkways and steps.

LED (light-emitting diode) lighting combines red, green and blue LEDs to create a vast spectrum of colours underwater – from standard solid colours to subtle shades, hues and tones of popular colours. You can even create your own colours and change the cycle they appear in to fit the mood in the backyard – from fast, flashing strobe-like colour changes for a party atmosphere to gradual colour changes for a relaxed atmosphere. LEDs also last longer than standard incandescent fixtures

and can be retrofitted into standard incandescent fixtures in a pool or spa.

For pool owners who don't want to install a permanent lighting system in their pool, there are new battery-powered light fixtures that float on the surface of the water to illuminate the water underneath. Just turn them on and toss them in the pool. Designed

to last for years of normal pool use, floating pool lights won't yellow from sunlight or swimming pool chemicals and do not have any sharp or abrasive edges – so they won't damage swimming pool liners.

Ask your Aquapro dealer about the various lighting options available so you can see your pool or hot tub in a new light! 

You Glow Girl!

The GlowBuoy® from Jacuzzi - designed for pool and hot tub owners who don't want a permanent lighting system. This futuristic light fixture floats on the surface of the water, illuminating the water underneath. Just turn it on and toss it in the swimming pool. Made of durable, impact-resistant Lexan material, the floating GlowBuoy is powered by a rechargeable battery that lasts up to four hours between charges, providing exceptional lighting effects in any body of water up to 6 m x 12 m (20 ft. x 40 ft.). 

Colour Your Night With
AQUA/LAMP's RAINBOW RAYS™
 LED-Digital multi-colour pool lighting

Rainbowrays™ LED light bulbs offer endless coloured lighting options in the pool and last ten times longer than regular Aqua/Lamp bulbs. Just replace your current underwater pool light with Rainbowrays™ and watch a rainbow of colours illuminate your pool.
